

MILAN 2023-24

SentiDev Forge

Conducted by Lambda and Epoch

Theme: Build a
Rating/Review System
for an application of
your choice.

Let's Elaborate / What We Expect

- Users can submit ratings/reviews for an item/object/entity
- Users can see insights from the aggregated information (the ML part)

Examples/Suggested Projects:

- *Course Review* : Collect student feedback, get information using sentiment analysis/keyword extraction. Feedback can be used by new students in the future.
- *Mess Review*: Display the menu and ask students to review any item. Making use of review data submitted by students on application display insights.

Additional Notes

- Project mentioned in the previous slides are just suggestions. Teams are encouraged to brainstorm and come up with new ideas that relate with the theme.
 - Your idea need not be specific to out college either. You're welcome to build something that helps the college, but that will highly hinder the brainstorming process.
- Project should involve all the these components to accomplish the following tasks:
 - Data Collection
 - Identify specific themes and trends in the feedback
 - Track changes in the sentiment over time
 - Display the data inference using an application
- Multiple teams from the same block are welcome.

Rules

- No limit on the number of teams per block.
- Each team should have 2 to 6 members.
- Collaborations between teams is strictly prohibited during the event.
- For the ML part APIs aren't allowed to be used.
- You are free to use open-source libraries and frameworks in your codebase. However, don't copy large chunks of code without proper attribution and licensing. Taking inspiration/using code snippets following necessary attribution and guidelines is allowed. Feel free to contact organizers in case of doubt.

Submission Guidelines

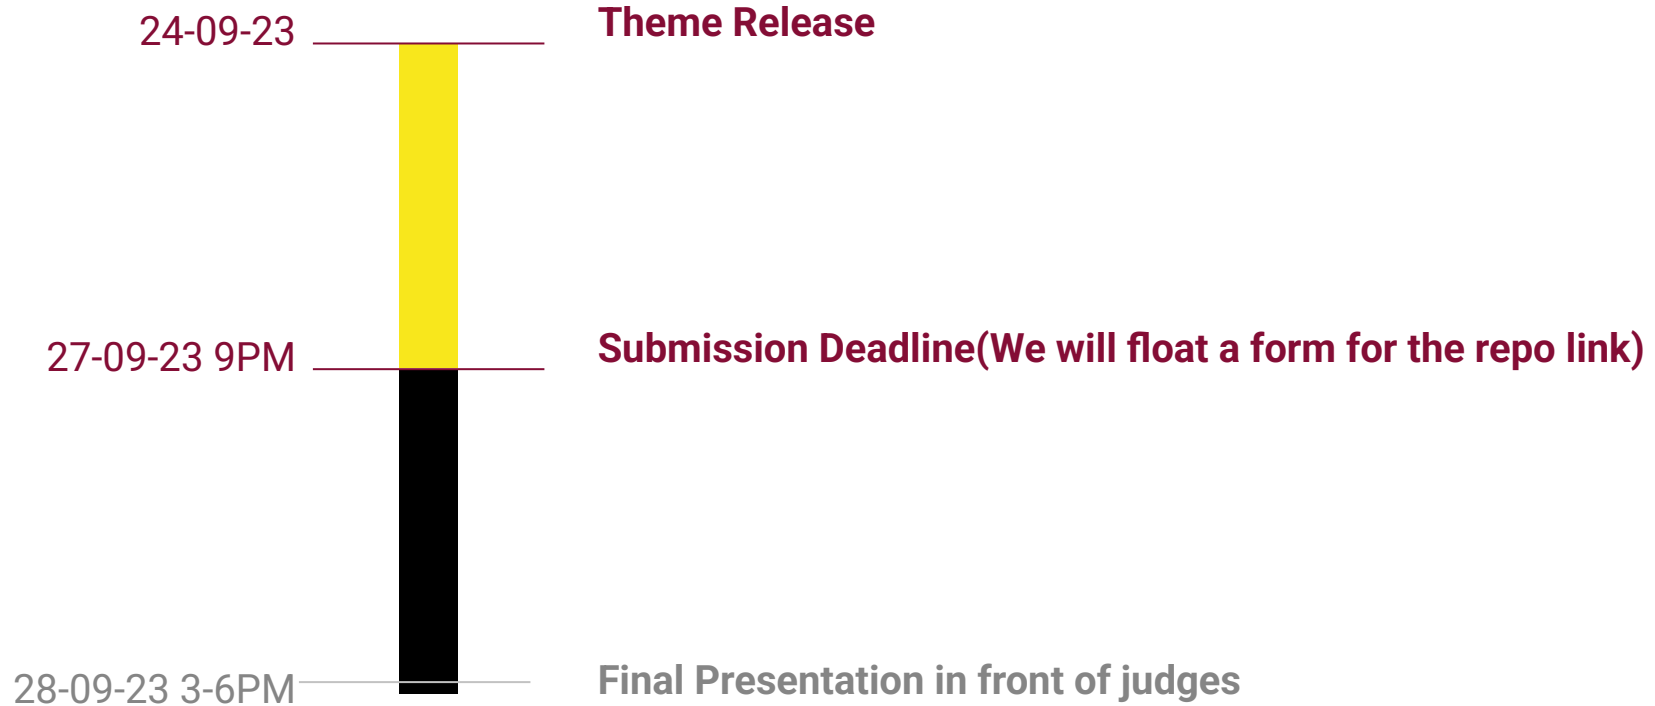

- Submission must be a public Github repository. Make sure your application is public and accessible.
- The repository should include a README file, which should contain a small explanation of your project, and instructions on how to set up and run it locally.
- A minimal PPT explaining your idea and implementation for the final presentation clearly explaining:
 - The USP (Unique Selling Point) behind your idea.
 - Motivation behind your idea
 - Etc.
- After submission, some teams will be shortlisted for a live demonstration in front of the judges.

Judgement Criteria

- The uniqueness behind your idea - 20%
- Completeness of the project - 30%
- Code quality, structure, and documentation 15%
- UI/UX - 5%
- Accuracy of the ML model on the test data - 15%
- Final Presentation - 15%

Organizer's and judges' decision in any case is final.
